quite gratuitously. To the ancients such a Saturn was not merely the result of the native's "not handling the energy properly." It was intrinsically and inevitably evil, or at least so it seems at first reading. However we must also remember that to the ancients, at least as exemplified in the Hermetic writings and in Vettius Valens, Saturn's malefic quality was ignorance or *agnoia* which led to *anangkē* or necessity. We also have to remember that the principle of day is light, and light is consciousness itself or *nous*, the first principle of the Sun. It may be that the theoretical principle involved in all of this is that Saturn in the daytime is most completely illuminated, and therefore its workings are capable of being made conscious. This would eliminate the negative effect of Saturn, that the individual is fated because he or she is unconscious of how matters really are. This is especially interesting in view of the modern astrological observation that saturnine types often believe that they are the only "realists." What kind of "reality" are they being realistic about?

The nocturnal Saturn, according to this principle, had nothing to aid the native in overcoming *agnoia* and *anangkē*. Consequently the native was doomed to live out his fate unknowing that necessity was an illusion.

Also we have Ptolemy's statement in Book I, "Whence, since the star of Kronos is productive of cold, they apportioned it to the heat of day." So both the heat and light of day are beneficial to Saturn.

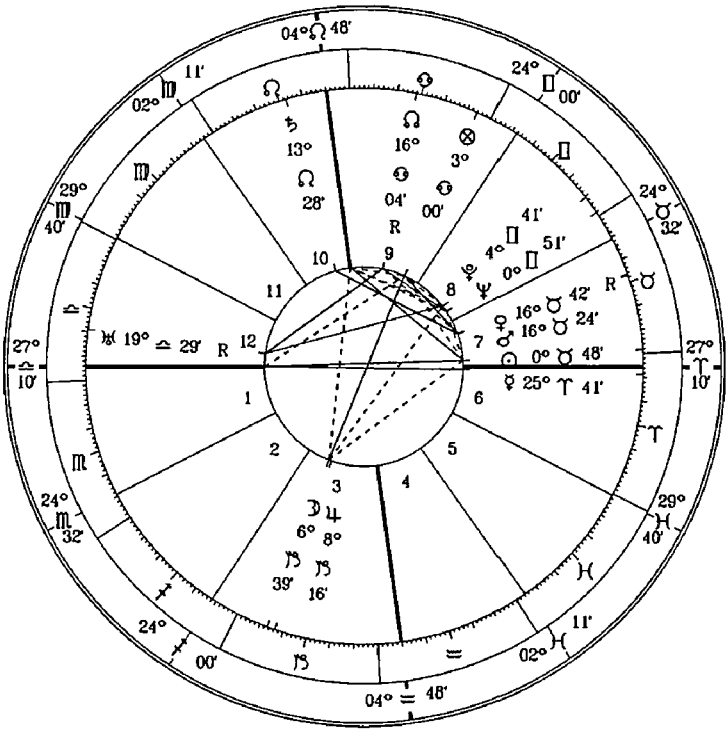

Jupiter — In the case of Jupiter we find a problem that is obviously as old as astrology. Astrologers are much more eloquent describing difficulty than success. What we find about Jupiter is that, being a diurnal planet, it works better in a diurnal chart than in a nocturnal chart, but the details are not all that well worked out. But in general *Jupiter in a diurnal chart or diurnally placed within a chart* with all other things being equal produces the best manifestations of Jupiter, success, power, wealth, etc. But if a malefic aspects a diurnal Jupiter, its benefits are reduced somewhat[1] but not eliminated. So we learn that a diurnal Jupiter is quite capable of withstanding some affliction.

Based on the principle that we discussed above, that daylight is a symbol of consciousness, we would expect Jupiter to be diurnal because it too is a symbol of knowledge and awareness. It is hard to read a book in the dark! Therefore, we would expect Jupiter at night to be less effective. *Jupiter in a nocturnal chart or placed nocturnally* does not

Chart #1: Adolf Hitler

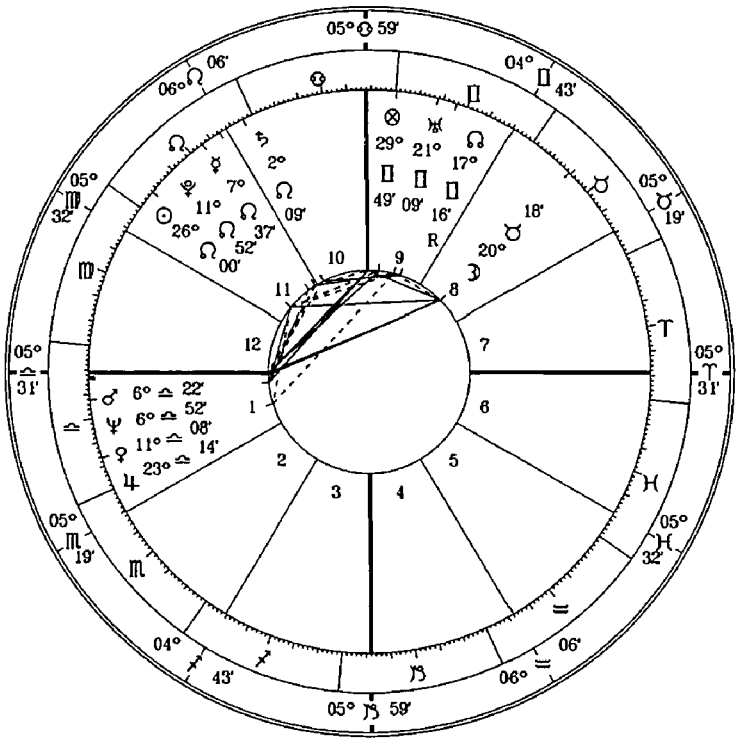

This chart of Adolph Hitler is very slightly rectified from the usual given time, but this does not affect anything that we are doing here.[1] We will look at the planets in order and examine their sect status.

---

[1] The usual data are those given in the Blackwell Data Base as follows: "1889, April 20 at 6:30 p.m. L.M.T. (17:37:52 U.T.) in Braunau am Inn, Austria (48N15, 13E02). Birth data of the Nazi führer from the civil register of births."

This chart is for 6:40:24 PM *C.E.T.* rather than 6:30 *L.M.T.* As one can see from the U.T. given above this is only a change of 00:02:32.

Chart #3: President Clinton[1]

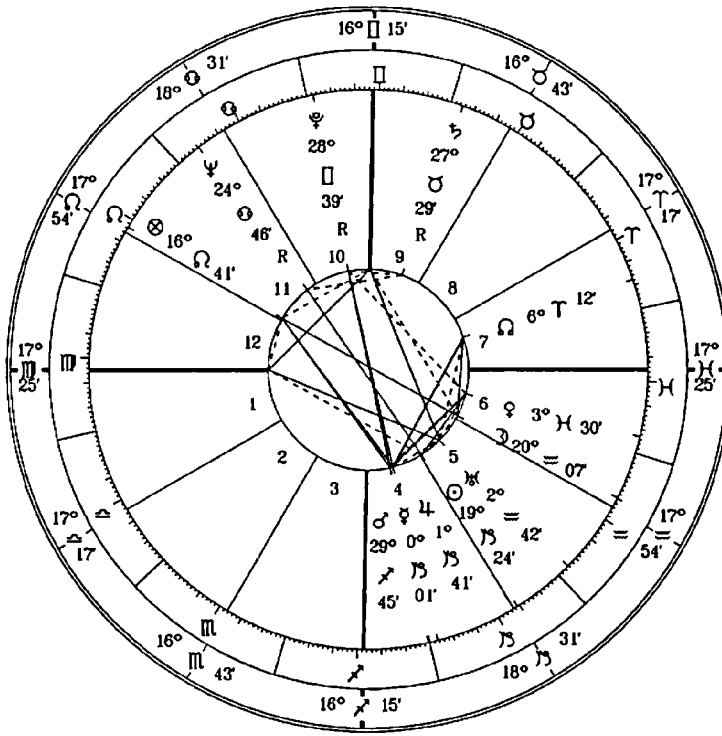

The Sun — Clinton's chart features a Sun in Hayz. It is in Leo, a diurnal sign, above the horizon. It is also, of course, in its own domicile and triplicity, a powerful Sun. Its only real shortcoming, not much of one at that, is that the Sun is the eleventh house rather than the tenth. As we shall see below in the discussion of Saturn, this placement of the Sun goes a long way to mitigating the situation of Saturn in the chart. It is also in sextile to Jupiter, which we will discuss under Jupiter. It is square the Moon as well, which we will take up next.

---

[1] The data are as follows: Aug. 19, 1946 at 8:51 A.M., C.S.T., Hope, Arkansas, 33N40, 93W35. The data are widely alleged to be from a birth certificate.

Chart #4 Richard M. Nixon[1]

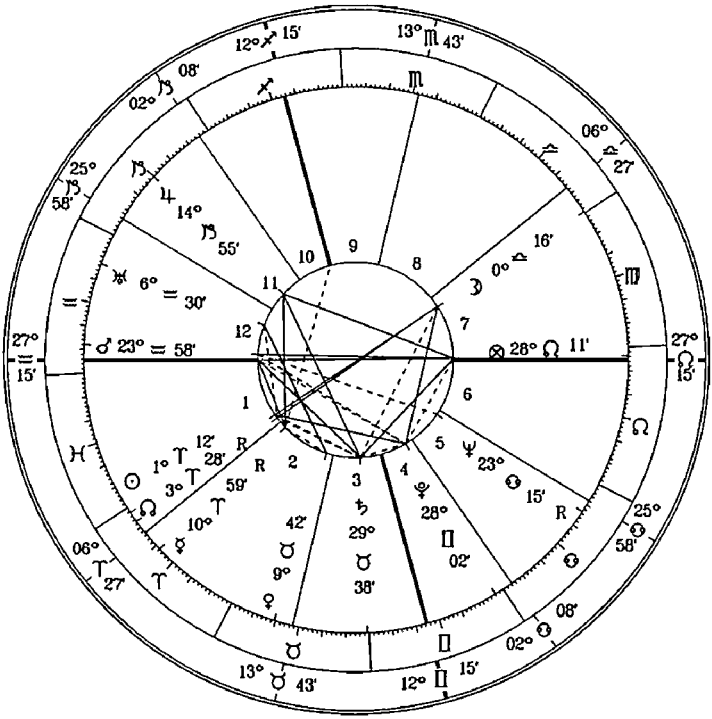

The Sun — ixon's Sun is below the horizon, which of course makes the chart nocturnal, and his Sun out of sect. It is also in Capricorn a nocturnal sign. So our first planet *extra conditione* is the Sun! However, this is quite a common condition. All it requires is that one be born at night with the Sun in a feminine or nocturnal sign. This tells us that the Sun *extra conditione* cannot be a terribly debilitating factor. But from what we

---

[1] The Blackwell Data Base has the following:
"1913, Jan. 9 at 9:35 p.m. P.S.T. in Fullerton Township, CA (33N52, 117W50). Birth data of the U.S. President was recorded by the nurse in attendance, Henrietta Shockney: 'Richard Milhous ixon, Thursday Nine thirty-five p.m., ineteen-hundred-thirteen, eleven pounds. "

every situation. These are all negative Saturn traits. And to make matters worse, Saturn is the dispositor of Nixon's Sun, Moon, Mercury, Jupiter, and Uranus. This makes it one of the most important, if not the most important dispositor in Nixon's chart. As such it is completely *extra conditione* and out of similitude.

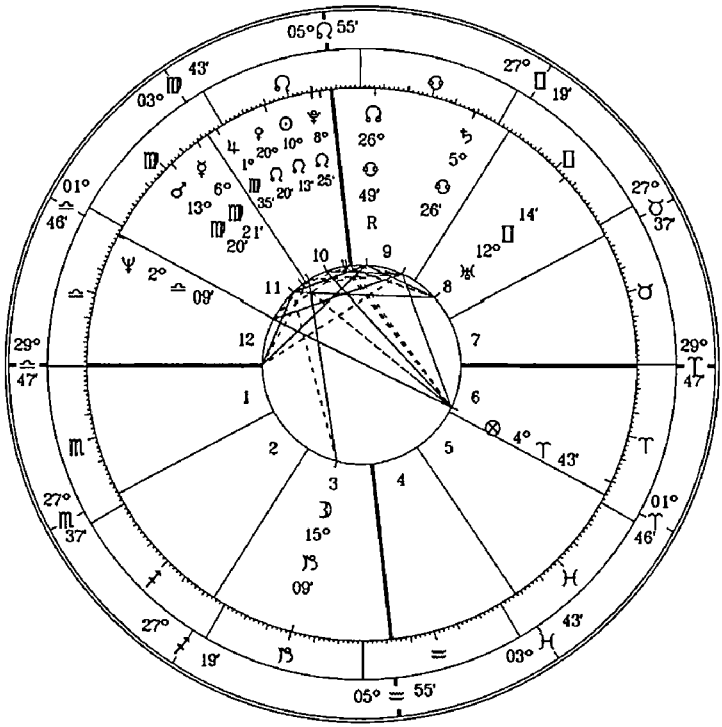

Chart #5: Charles Dederick[1]

The next chart is that of the founder of Synanon, Charles Dederick. Since

[1] According to Lois Rodden the data are as follows: March 22, 1913 at 4:20 A.M. C.S.T., Toledo, OH, 41N39, 83W33 from birth records, obtained by E. Steinbrecher

Chart #6: Tony Costa[1]

I thought it might be interesting to include one last chart, which I will not go into in as much detail as the preceding charts. But it has a personal interest to me because the events associated with this person occurred quite near where I live on Cape Cod, and as such I know quite a bit about the case. I was surprised to discover this chart in the same book by Lois Rodden from which I took the data concerning Charles Dederick above.

Quite aside from any personal interest, this chart illustrates that a planet in dignity in Hayz and angular is not necessarily a good thing. This

[1] The data for this are also from Lois Rodden's *Astro-Data V*: August 2, 1944 at 12:33 P.M. E.W.T., Cambridge, Mass., 42N22, 71W06.
